Healthy and Resilient

The machine vision industry is doing splendidly. This is demonstrated by the sales development of the last ten years, which the VDMA has reported on for the industry in Europe. Revenues doubled between 2008 and 2017. In Germany alone, industrial image processing now generates sales of EUR 2.7 billion (as of 2018). The current wave of takeovers (TKH – Lakesight, Stemmer Imaging – Primepulse, Teledyne Dalsa – Point Grey) is a sign that the industry and financial investors believe in a rosy future for machine vision. The fact that Beckhoff and B&R integrate corresponding functions into their controllers is further proof of this thesis.

Accordingly, the companies confidently refer to their own industry trade fair Vision and at least most of them stay away from the major automation event SPS. Of course, this also has to do with the industry's structure and the rather general orientation of the Nuremberg trade fair. Nevertheless, the machine vision industry no longer has to gather at its own niche trade fair to be visible. Rather, it has created its own event that machine builders and users interested in machine vision should not miss.

But also here too, clouds can be seen on the horizon: The trade disputes between the USA and China, as well as Brexit and the introduction of customs duties are putting pressure on growth. Even the crisis in the automotive industry is not just a German problem.

All in all, the VDMA expects sales growth in machine vision to weaken. And how things will continue next year cannot be foreseen at present. Only one thing is certain: 2020 is a vision year and component and system manufacturers, software providers and integrators, distributors and research institutes are concentrating on the essentials, namely world-class machine vision. In recent years, they have proven that they are successful in this field and that's why the industry doesn't need to let forecasts slow it down.

I wish you a successful year 2020.

David Löh

Deputy Editor-in-Chief

Next-generation Laser displacement sensors

More Precision: The new optoNCDT 1220/1320/1420 laser sensors

Performance

- High reproducibility from 0.5µm and high measuring rate 4 kHz for precise and dynamic measurement tasks
- Excellent price/performance ratio

Compact sensor

- Compact design with integrated controller
- Easy integration into confined spaces

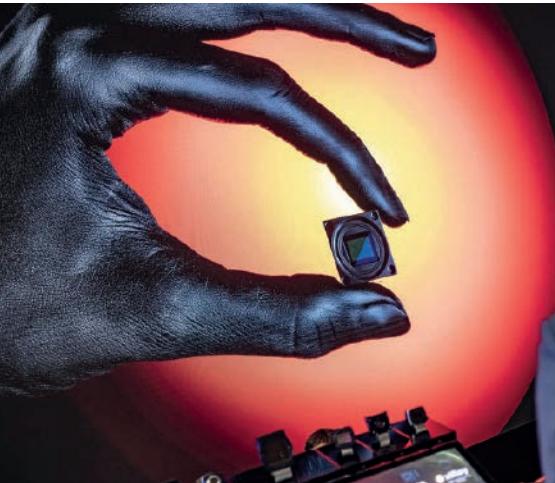

Flexible

- Measuring range up to 500 mm
- Predefined and individual presets enable various measurement tasks

Machine Vision and Optical Metrology in Europe

The inspect Buyer's Guide 2020

Throughout the year, we aim to provide you with information about new developments, technological trends, groundbreaking applications, new products and leading companies. Throughout the year, we are faced with the recurring challenge: What to select, what to highlight, what to point out. There is never enough room to cover it all. So once a year we seize the opportunity to present to you a comprehensive overview of the machine vision and optical metrology industries.

The inspect Buyer's Guide is published in its 11th year now, for the 12th time it also serves as the official Buyer's Guide of the EMVA, the European Machine Vision Association. The guide contains information about more than 500 companies from over 30 countries. The inspect Buyer's Guide has a clear focus on companies doing business in Europe or

exporting their goods to Europe. Naturally, this comprises companies and organizations from all over the world.

Online ...

The inspect Buyer's Guide is a true cross-media product. At www.inspect-online.com/buyers-guide the online database provides sophisticated search functions for all listed

companies. Every entry can be searched for with full-text search, and every listed company will be found here based on the individual company description. Additionally, every listed company will be found by name, company category (e.g. producer, integrator, research facility, association, etc.) and country of headquarters.

The Online Buyer's Guide provides sophisticated search functions for all listed companies.

Companies providing a full-fledged company profile will be additionally found in multiple categories with the keyword search.

The full text search for "CMOS" yields 40 results: every company that used the word "CMOS" in their description is listed.

Companies wanting to provide more information and aiming at even better search results are listed with a company profile, including detailed company data and a listing of products offered, industries served and applications catered to. These, and only these, companies will be found in the respective search categories.

The online Buyer's Guide is open for companies within the scope of the inspect all year round. In this way it is always up-to-date.

... and Print

The availability of data online is a clear benefit when presented with clever search functions. However, sometimes you do not want to bother going online, or you don't want to search specifically but rather obtain a quick overview. In these instances a printed version has its unchallenged advantages. Not to mention the ease-of-use when taking notes right next to the provided data. Thus, once a year the printed edition of the inspect Buyer's Guide is provided to you. With this guide we aim to give you a full overview

that is still easy to use, a complete set of information that is still not too subdivided into too many categories.

The inspect Buyer's Guide 2020 is divided into three main chapters: Topics, company profiles for the main global regions,

and company listings for the main product categories. In an industry as innovative and dynamic as ours it will most likely never be possible to provide an overview that is final and complete, but we do our best to come as close as possible. ■

New 3 & 4-CMOS industrial prism line scan cameras from JAI

JAI.COM

Color line scan excellence...

(R+G+B+NIR)¹⁰

...To the power of 10

Now for the first time, you can leverage the color accuracy and spatial precision of JAI's Sweep+ Series prism line scan technology and enjoy the plug-and-play convenience and networking flexibility of GigE Vision. Equipped with a high performance 10 GigE interface, the new SW-4000T-10GE provides 4k, 3-CMOS RGB output at up to 97 kHz while the SW-4000Q-10GE provides 4-CMOS RGB + NIR output at up to 73 kHz.

Not ready to transition to a 10 GigE architecture yet? No problem. These new cameras automatically negotiate to match the data rate of your host/network. Whether it's NBASE-T at 5 Gbps or 2.5 Gbps, or even traditional 1000BASE-T at 1 Gbps, the choice yours.

The SW-4000 10GE cameras feature user-selectable pixel sizes, V & H binning, connection to rotary encoders, and much more. They're the perfect combination of precision, performance, and functionality for your next color line scan system.

Visit www.jai.com/power-of-10 to learn more or to request a price quote or evaluation.

New 10 GigE cameras:

- ✓ Sweep+ Series prism line scan
- ✓ 4k (4096 pixels)
- ✓ 7.5 x 7.5/10.5 µm pixels
- ✓ 10 GigE Ethernet interface

(Backwards compatible to NBASE-T and 1000BASE-T)

SW-4000T-10GE

- ✓ 3-CMOS RGB
- ✓ Up to 97 kHz
- ✓ 8/10-bit

SW-4000Q-10GE

- ✓ 4-CMOS RGB + NIR
- ✓ Up to 73 kHz
- ✓ 8/10-bit

See the possibilities

Machine Vision Industry Today and Tomorrow

Market Developments and Trends Relating to Vision 2020

The machine vision industry can look back on a phase of strong growth. The future also promises brilliant business. One reason for this is that more and more user industries are recognizing the benefits of machine vision for their processes – not least in connection with industry 4.0. This development will also be reflected in the Vision 2020 trade fair.

Machine vision is conquering an increasing number of application areas – through its constant use for quality, efficiency and product reliability – also outside factories. According to the latest figures from the German Engineering Federation (VDMA), the machine vision industry in Germany and Europe has been posting turnover and growth records for years. Turnover increased by an average of 13 per cent per annum between 2013 and 2017. Turnover in the machine vision industry doubled within a space of just ten years (2008 to 2017). In 2017 the German machine vision industry alone achieved a new record turnover of €2.6 billion, i.e. an increase of 18 per cent. The industry grew even further in 2018 and recorded an increase of 4 per cent.

Machine Vision Industry Is a Data Supplier

Machines and robots learn “how to see” with machine vision systems. Machine vision is therefore becoming a key technology of the future. Not only is it being used to a greater extent in the worldwide automation competition between traditional branches of industry, it is also increasingly conquering new industries outside factory automation. Improved quality, higher reliability, increased safety and cost-efficiency are properties which are required both in non-industrial application areas and in the smart factory of the future.

The global machine vision market is also characterised by enormous dynamism: pronounced merger and acquisition activities

have been forecast for the industry for years and they increasingly seem to have started becoming reality in the last few weeks and months. Whereas image sensor manufacturers, in particular, were initially affected by changes, this now also increasingly applies to camera manufacturers. The industry is changing permanently and companies are being confronted by a continually changing competitive environment. A large number of companies are combining synergies and are merging in order to react to new market participants or jointly offer new system solutions over and beyond individual components.

Investor groups have also recognised the strategic importance of the industry and are investing more in machine vision companies. The new players include, for exam-

©Landesmesse Stuttgart

The organizer of Vision expects more visitors and exhibitors than in 2018.

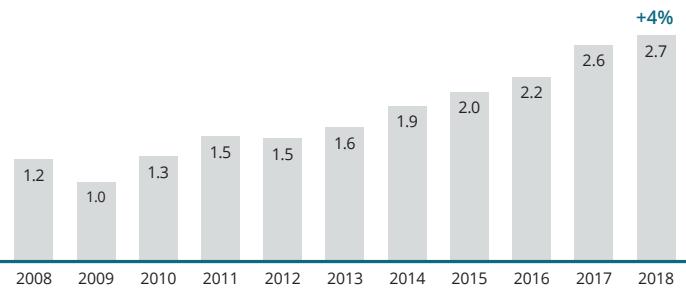

ple, camera suppliers from Asia, but also automation companies which do not originally come from the machine vision sector. These companies have recognised the attractiveness and key role of the machine vision industry, for example as a data supplier in the context of Industry 4.0, and have the necessary company size or R&D resources. Small and medium-sized machine vision firms are faced here with great challenges which are also being intensified by the imminent generation change in many companies and the lack of company successors. In addition to current market tendencies, we are seeing new technological trend topics which are now promoting machine vision and with which entirely new players are also entering "the machine vision stage."

Vision Expects More Growth

These developments will also be reflected at the forthcoming Vision, the leading world trade fair for machine vision, which will be held in Stuttgart from 10 to 12 November 2020. Messe Stuttgart is currently assuming that the trade fair will experience additional growth in terms of the number of exhibitors and visitors. In 2018, when the Vision last took place, 10,000 visitors came to see the products and services of 472 exhibitors from 31 countries.

New strategic company alliances will be presented in Stuttgart along with first-time exhibitors from the smart factory sector who seamlessly integrate the topic of machine vision in automation and the area of machine control systems. Due to the trend towards embedded vision, new exhibitors involved in

embedded systems will be able to show their portfolio and know-how at Vision 2020. The trade fair will focus on machine vision in the "non-visible area", i.e. short wave infrared (SWIR), hyperspectral imaging, polarisation cameras and thermography, as another trend topic. Visitors will also be able to experience even more start-ups and new companies from areas such as artificial intelligence and deep learning. Data security will be another exciting topic area. Last but not least, Vision 2020 will again feature all global key players from the area of machine vision components together with a large number of system integrators and solution providers who use the components to manufacture systems and implement them within the framework of application solutions in specific industries. ■

Next Step towards Industry 4.0

OPC Vision

The most important prerequisite for industry 4.0 is the constant communication of the devices during the production process. For this to succeed, interfaces such as "OPC Vision" are required, which are manufacturer-independent and can therefore in principle be used in all devices. The lately released „OPC UA Companion Specification Part 1“ allows the control of a vision system in a generalized way, whereas the contents stay vendor-specific and are treated as black boxes.

"Wouldn't it be great, if machines could communicate in a direct way with each other? This idea is at the core of the Industry 4.0 movement to create the smart factory of the future. The goal of reaching 'interoperability' is the new core competence that must distinguish the future products in a connected world of Industrial IoT – but even more, the acting people and organizations involved," says Dr. Horst Heinol-Heikkilä, Managing Director of Asentics and board member of VDMA Robotics and Automation and VDMA Machine Vision. "As chairman of the VDMA OPC Machine Vision Initiative and its working group, I am proud that Machine Vision plays a pioneering role and as one of the first VDMA divisions, is presenting the release of an OPC UA Com-

panion Specification to the public, thanks to the extraordinary commitment and cooperation by the core working group members who worked very hard and made it possible."

Stefan Hoppe, President and Executive Director of the OPC Foundation commented: "The OPC Foundation truly appreciates the results of the VDMA OPC Machine Vision initiative. The initiative has taken a decisive step forward into the Industrie 4.0 era that is second to none. Beyond the work done to adopt OPC UA as the interoperability platform for Machine Vision, we applaud the joint working group for embracing the spirit of inter-organizational collaboration on a global scale with G3. This aligns well with a key OPC Foundation focus on encouraging organizations to work together to reduce the vast number of overlapping 'custom' information models into a harmonized set of OPC UA Companion Specifications. This will benefit end-users and vendors around the world by lowering the barriers in the way of true interoperability."

The OPC UA Companion Specification Part 1

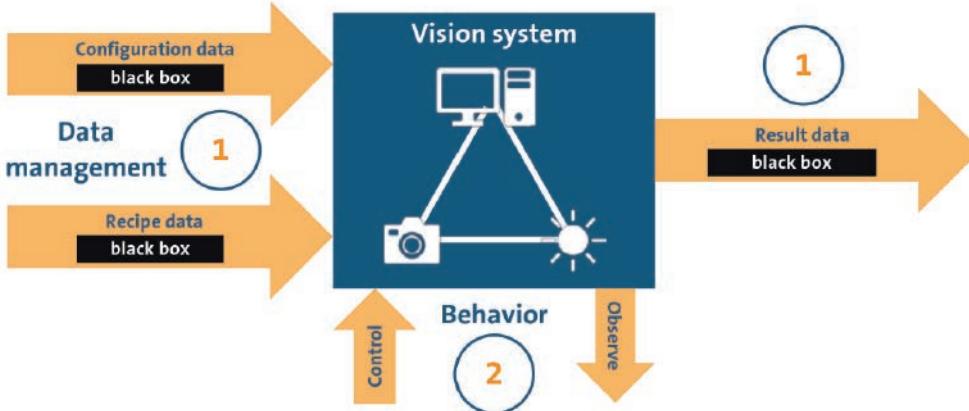

Part 1 describes an abstraction of the generic vision system, i.e. a representation of a so called digital twin of the system. It handles the management of recipes, configurations and results in a standardized way, whereas the contents stay vendor-specific and are treated as black boxes.

It allows the control of a vision system in a generalized way, abstracting the necessary behavior via a state machine concept. A test implementation has already been successfully completed and was presented to a large

audience of automotive engineering experts at a major event of the automotive industry in Germany dedicated to OPC UA in May 2019. A hardware demonstrator is now being developed which will be showcased at major trade shows in Germany soon. And, as the addition "Part 1" indicates: the work of the VDMA OPC Machine Vision Initiative does not stop here. In addition, Part 1 establishes a kind of infrastructure layer that enables a simplified and uniform integration of all possible image processing systems into higher IT

About VDMA Machine Vision

The VDMA represents over 3,200 mainly small and medium size member companies in the engineering industry, making it one of the largest and most important industrial associations in Europe. As a part of the VDMA Robotics + Automation Association, VDMA Machine Vision unites more than 115 members: companies offering machine vision systems and components. The objective of this industry-driven platform is to support the machine vision sector through a wide spectrum of activities and services. Current activities include statistics and the annual VDMA Machine Vision Market Survey, marketing services, public relations, trade fair policy, future radar, networking events and conferences. Find out more about VDMA Machine Vision at: www.vdma.com/vision.

The main focus of OPC Vision part 1

© VDMA

The OPC Foundation

The OPC Foundation, Scottsdale, AZ, USA, is the globally leading community for interoperability solutions based on the OPC communication specifications. OPC is an interoperability standard for the secure, reliable and platform-independent exchange of information. By defining an interface between

client and server or between server and server varying use-cases can be covered. OPC technology is extensively used for integrating information in industrial automation and for facilitating data transfer from the smallest sensor into enterprise IT. The objective of the OPC certification program

is to guarantee immediate operational readiness of OPC products in real-life applications. With over 700 member companies the OPC Foundation promotes globally training, awareness and adoption of the OPC specifications. Find out more about OPC Foundation: <https://opcfoundation.org>

production systems (PLC, Scada, MES, ERP, Cloud, ...). The idea is that beyond Part 1, other proprietary elements are broken down and replaced by standardized information structures and semantics, such as configuration, recipe and result information.

VDMA OPC Machine Vision Initiative

In January 2016, the VDMA Machine Vision Board decided to develop an OPC UA Companion Specification for Machine Vision. The work has been carried out within the joint working group, which consists by definition, of the OPC Foundation and a host organization, which is VDMA Machine Vision, a sector group within the VDMA Robotics + Automation association. A core working group with 17 experts

from leading European machine vision companies took on the pioneering challenge, came up with proposals for the approach and contents and monitored the feedback from the wider machine vision industry and end-users worldwide.

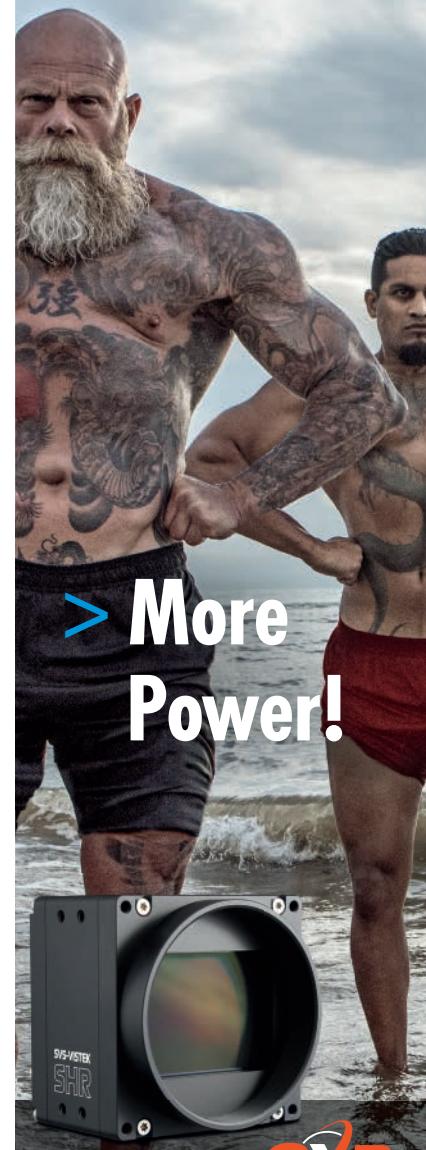

To have broader reach, VDMA Machine Vision decided to bring this important standardization work into the global standardization cooperation for Machine Vision called G3. This G3-cooperation consists of the American (AIA), Chinese (CMVU), European (VDMA and EMVA) and Japanese (JIIA) trade associations acting around the world. "Worldwide, the machine vision community has had the chance to contribute to the contents of the OPC UA Machine Vision companion specification – which will now lead to

a broad acceptance and uptake of the new standard," says Dr. Heinol-Heikkinen.

In total, 35 days of face-to-face meetings, about 50 online meetings and countless individual working hours of the Working Group now comes to an end with the release of the OPC UA Machine Vision Companion Specification Part 1. It is now available for download at the OPC Foundation website and on the VDMA website. ■

Standardization as the Success Factor of Machine Vision Technology

Who Drives Standardization and What It Takes

The benefits of industrial standards are well known. But how do they actually come about? Who decides on their content and development direction? The EMVA as one of the essential drivers of standardization in industrial image processing explains the process.

Standardization is highly relevant to any industry, and none more so than the relatively complex and globally distributed Machine Vision industry. The standardization endeavors in the last 15 years have become a key pillar to the global breakthrough of machine vision technology in all kinds of customer industries. For this reason, EMVA plays an active role in the development of Machine Vision standards. Standards are developed by industry experts of the machine vision industry to ensure high quality and relevance to the sector. All machine vision companies are invited to participate in the standardization activities of the EMVA and standardization work is conducted in a spirit of co-operation with the objective of adding value to the development of the machine vision industry at large. In order to maintain transparency information on the standards and on the status standards development is regularly available.

Worldwide Cooperation on Standards

In a globalized world standardization cannot be driven by one region alone. This would potentially lead to development of competing standards. In order to avoid such developments and with respect to the time-consuming process of developing standards EMVA soon sought cooperation on the field of standards development with other Machine Vision associations. As a result already in 2009 EMVA (Europe), AIA

(North America) and JIIA (Japan) entered into a cooperation agreement on standards called the "G3". Since then two more associations joined "G3": VDMA (Germany) in 2014 and CMVU (China) in 2015. Through this cooperation within G3, EMVA members have access to the development process of all standards that are hosted by the G3 associations.

International Vision Standards Meetings (IVSM) and Future Standards Forum (FSF)

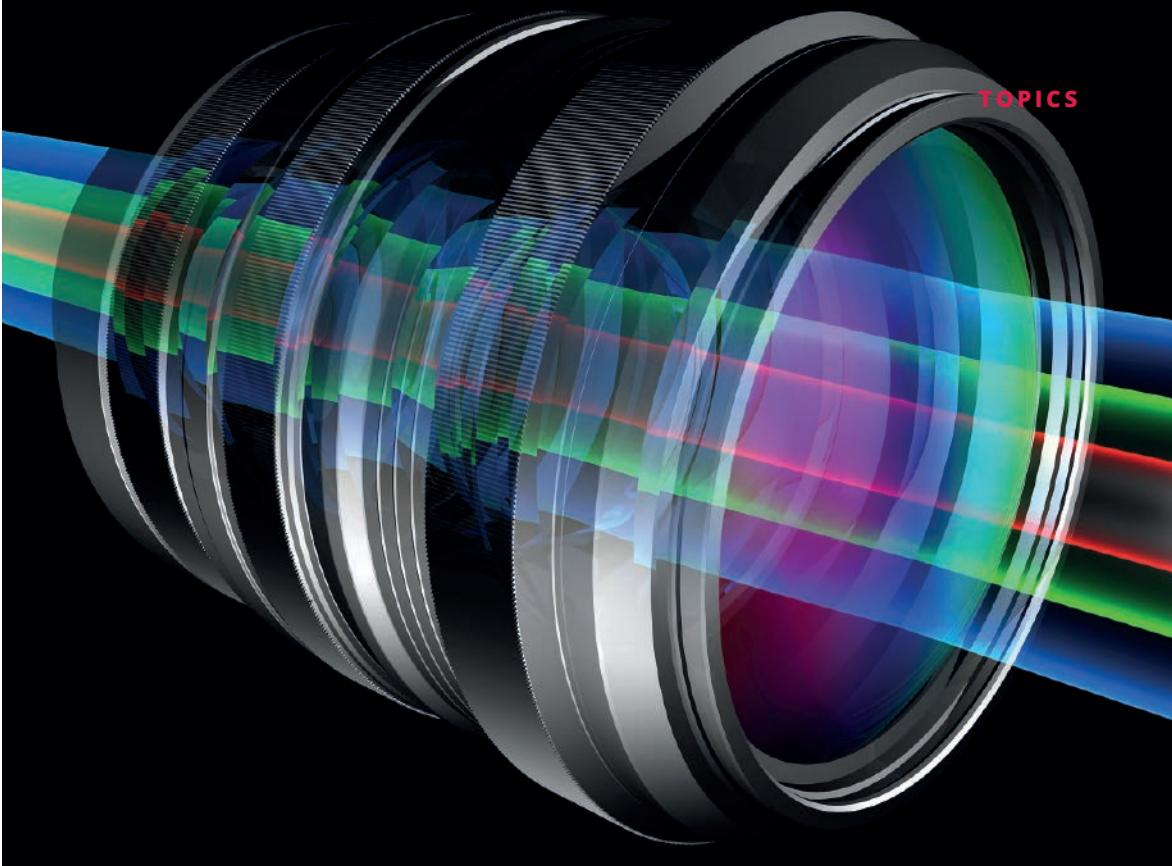

In practice, each machine vision standard is hosted by one of the associations within G3 and has a working group of machine vision engineers and scientists who may even work for competing institutions on the market but commonly develop the standards. All working groups of the different machine vision standards personally meet twice a year during the International Vision Standards Meeting (IVSM) in spring and fall that alternately takes place in Europe, Asia and North America. Thus, during the five days of the meetings close to 100 standards experts gather. One highlight of each International Vision Standard Meeting is the so-called Plugfest. During this event it is possible to test any exciting or new device with most worldwide available host-applications for interoperability. As the Plugfest attendance is restricted to people from the standard working groups and/or programmers from the involved companies most problems can be discussed and sometimes even solved short-term without the usual barriers where these engineers meet such as during trade shows or in a customer usage situation. The Plugfest has its roots in the development of the GenICam standard and nowadays includes practically all machine vision interface standards present during an IVSM.

In 2012, the Future Standards Forum (FSF) was established as a working group under the umbrella of the G3 in order to provide the necessary oversight of standards, and to plan future standard developments. The Future Standards Forum is chaired by representatives of the G3 associations and meets twice a year during the International Vision Standards Meeting (IVSM).

Machine Vision Standards Brochure

One of the first deliverables of the Future Standards Forum was the Global Machine Vision Interface Standards Brochure which is the first and only overview of all major MV interface standards in use today. The brochure is regularly updated to reflect the latest standard developments and can be downloaded free of charge. ■

© Yakobchuk/Getty Images

New Standard Initiatives Hosted by EMVA

Open Optics Camera Interface (OOCI) and emVision

Along with the two widely accepted standards GenICam and EMVA1288 the EMVA is currently hosting two new standard initiatives which are geared towards new industry requirements.

The first one is called emVision and aims at the lasting industry trend towards embedded vision. Cameras and PCs as the main components of machine vision systems tremendously miniaturized over the last years. The combination of a processing board with a powerful small camera, make it possible to design a very compact vision system which can be integrated into a larger system. Such systems are called embedded vision systems and are of high interest to the machine vision industry. However, adaptation is needed in order to enable industrial solutions to use embedded systems. Hosted by the EMVA, in August 2018 this new standard initiative formed to address these needs. With an impressive support from the machine vision industry, the standardization group currently develops a standard to achieve an easy integration and exchange of different

embedded cameras within embedded vision applications. Already more than 40 companies are showing interest in this initiative and the working group of the standard includes delegates from Adimec, Allied Vision, Alysum, Avaldata, Basler, Baumer, Euresys, Flir, Framos, Matrix Vision, and Sony Semiconductor Solutions Corporation. The next steps of the standard initiative are to create a white paper with concepts and goals to be adopted by the Future Standards Forum (FSF) early in 2020, the year where also a first release candidate is targeted.

Open Optics Camera Interface (OOCI)

The second new standard initiative currently driven by the EMVA is the Open Optics Camera Interface (OOCI). As in machine vision the lens mount is still without any specification of how to control focus, aperture, etc. recently the EMVA in 2017 has decided to start a new standardization group on an open lens camera communication standard to standardize the camera interface for optical components inside of, or attached to, machine vision cameras. Therefore, the focus of this standard is not so much the different mechanical existing as future lens mount, but a common communication protocol closely linked to the GenICam Standard. The stand-

ard is concentrated on the need to control lenses, filters, filter wheels, shutters, apertures, etc. with a common software interface. The basic idea is to reuse and apply existing technologies from the GenICam standard as much as possible and integrate the optics communication into GenTL and SFNC. GenTL will ensure compatibility with most vendor specific existing electrical interfaces such as Analog/OneWire/I2C/SPI. SFNC will make it easy to display and control the optics command interface from most existing end user applications. The OOCI working group believes that having this open standard will allow for the widest possible benefit to an industry that has to this date relied on de-facto standards, designed by single companies, for other markets. Already, major camera and optics manufactures have joined the working group and a white paper has been published as preparation for the global adoption of the standard. ■

GEN<I>CAM

GenICam: The Backbone of Machine Vision Standardization

Basics and Latest Updates

Since its release in 2006, the GenICam standard has evolved steadily. Today it is indispensable in the world of industrial machine vision. To keep it that way, the development continues.

In principle, machine vision camera interface standards are divided into hardware standards and software standards. While hardware interface standards ensure that cameras can be connected to any driver or frame grabber, the programming interface of software interface standards makes sure that the drivers/software development kits (SDKs) can be used from different vision libraries or even directly by developers. Developers can exchange cameras, drivers or even the whole interface technology without having to make significant changes to software if they use a standards-based SDK.

From the very beginning the Generic Interface for Cameras which is known as GenICam has been designed as generic programming interface for all kinds of devices (mainly cam-

eras), no matter what interface technology they are using or what features they are implementing. The result is that the application programming interface (API) will be identical regardless of interface technology. Since its initial release date in September 2006 the GenICam module family has constantly grown which makes the GenICam standard today the backbone of all standardization since all current machine vision hardware interface standards refer to GenICam as the widely established generic programming interface for all kinds of devices (like frame grabbers and cameras) and applications.

The GenICam standard is made up of modules. The number of modules has been growing within the years. Currently the following modules are available:

SFNC (Standard Features Naming Convention): This is the part of GenICam that most users see. It standardizes the name, type, meaning and use of device features so that devices from different vendors always use the same names for the same functionality. These features are typically shown in a tree view or can be directly controlled by an

application. A related standard is the PFNC (PixelFormat Naming Convention) which defines how to consistently name pixel formats and lists the formats in use.

GenApi (Application Programming Interface): This defines the mechanism used to provide the generic API via a self-describing XML file in the device that includes all available device features. It is also the name of the reference implementation of GenICam, provided as production-quality code, as part

With SDKs Developers can exchange cameras, drivers or the interface technology without making significant changes to software.»

of the GenICam download. Part of GenAPI is the Schema which defines the format of the XML file.

GenTL (Transport Layer): This standardizes the transport layer programming interface. It is a low-level API to provide a standard interface to a device regardless of the transport layer (with or without a frame grabber). It allows enumerating devices, accessing device registers, streaming data and delivering asynchronous events. GenTL also has its own SFNC.

GenCP (Control Protocol): This is a low-level standard to define the packet format for device control and is used by interface standards to save them needing to reinvent a control protocol for each new standard.

GenDC (Data Container): GenDC stands for "Generic Data Container" and is the latest member of the GenICam standard family. Similar to other machine vision standardization projects, the main objectives of GenDC are to avoid work duplication, simplify common tasks, and establish a common definition between various manufacturers. The GenDC module defines a generic and flexible imaging data container representation. Its basic principle is to create a layer that decouples "what" to transport (i.e., the data container description) from "how" to transport it (i.e., the data transmission method) using a particular media. GenDC—being transport layer (TL) neutral—standardizes the format of the data buffers transmitted and received by various present and future TL standards.

Also, since it is defined and maintained by a common workgroup composed of representatives from GenICam and each TL, the TL committees are now able to focus solely on providing efficient and reliable real-time data transmission over a particular physical media. TL standards specifications are thus no longer affected by changes to data representation or by new payload types, which can now be added without requiring updates. Moreover, since the GenDC specification defines a self-described data format, it is also a standard way to represent almost any imaging-related information in

many different contexts beyond the data exchange between a transmitter and a receiver. This includes, for example, data containers stored in host memory or in a file. Finally, with all the above features, GenDC completes the GenICam offering of TL-independent modules to control and exchange data between imaging devices including GenAPI, SFNC, GenCP, GenTL, and now GenDC.

Ever since its first release the GenICam standard has always

adapted to industry needs and with the latest GenDC module proofs that the standard permanently finds answers how to facilitate the application of machine vision technology through software standardization. Through common development efforts within the GenICam Working Group but increasingly also through growing cooperation with other standard working groups the evolution of GenICam will continue. So will the GenICam standard play an active

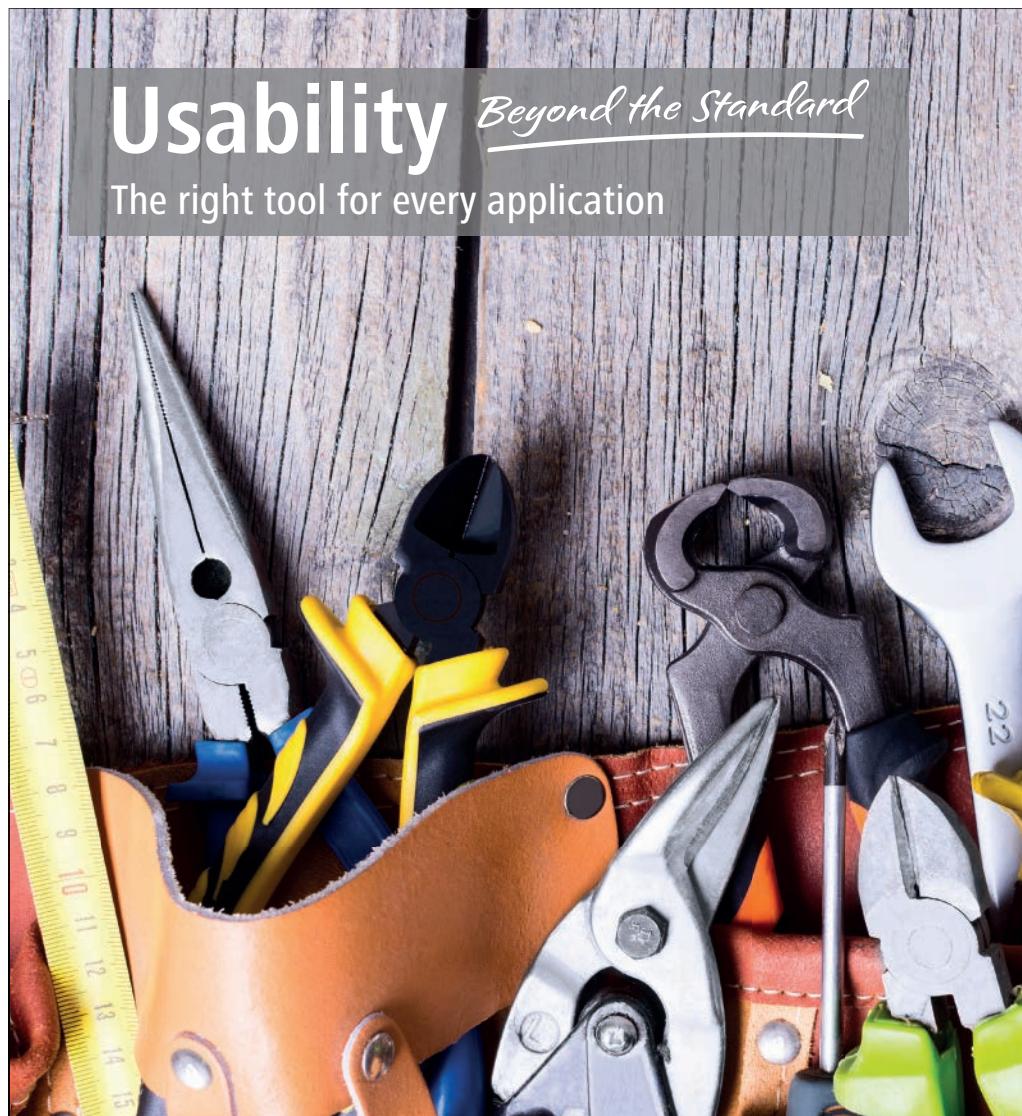

interface role in the development of the two currently new EMVA standard initiatives emVision and Open Optics Camera Interface (OOCI). ■

Sensor Review Mono Cameras

Part 1

Flir has just finished their 2019 edition of the camera sensor review of 100+ models, EMVA1288 tested and compared. In part 1 of this series, we are having a look at the EMVA1288 specification comparison charts and the guide to using the EMVA1288 specifications. Part 2 will be dealing with choosing the right sensor type.

EMVA1288 Specification Comparison Charts

Quantum Efficiency (%) at 530 nm

Quantum efficiency (QE) is the ability of the sensor to turn photons into electrons, or in other words, turn incoming light into an electrical signal for imaging. A higher QE % means greater sensitivity for detecting light. A sensor with a measurement of 79 % means that for every 100 photons that hit the sensor an average of 79 will be detected. Please note that the results below are taken at the wavelength of 530 nm.

Dynamic Range (dB)

Dynamic range describes the camera model's ability to detect the maximum and minimum of light intensities (shadows and highlights). Models with higher dynamic range can detect more detail in the darks and lights.

Temporal Dark Noise/Read Noise (e-)

Temporal dark noise (also known as read noise) comes from energy within the sensor and the surrounding sensor electronics. Over time, random electrons are created that fall into the sensor wells and are detected and turned into signal. Models with lower read noise measurements produce cleaner images.

Saturation Capacity (Well Depth; e-)

The saturation capacity (well depth) is the largest charge a pixel can hold before over-saturation occurs and signal degradation begins. Saturation must be avoided because it diminishes the quantitative ability of the sensor and in the case of CCDs produces image smearing due to a phenomenon known as blooming.

Absolute Sensitivity Threshold (y)

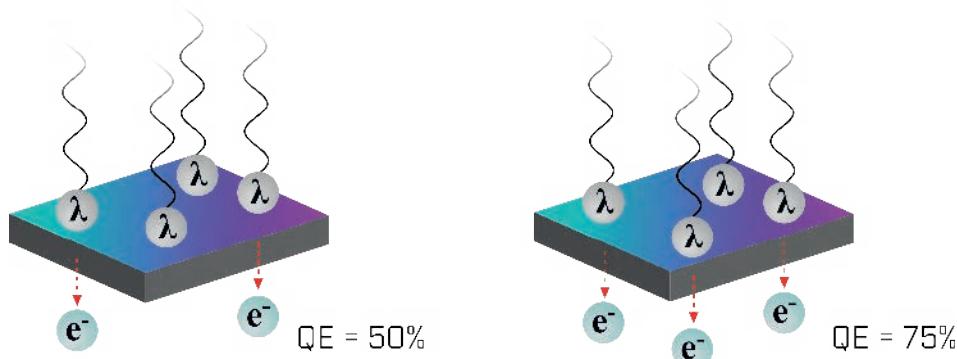

Absolute sensitivity threshold is the minimum number of photons needed to equal the noise level. The lower the number the less light is needed to detect useful imaging data.

Guide to Using the EMVA1288 Specifications

What Is the EMVA1288 Standard?

The EMVA1288 standard for measuring and reporting imaging performance of image sensors enables sensors to be compared based on objective and consistent measurements.

Combinations of EMVA1288 measurements can be used to easily assess the relative suitability of a sensor for your application. For example, fluorescence microscopy applications where every photon possible should be detected, will benefit from a low absolute sensitivity threshold, which is a com-

bination of quantum efficiency and temporal dark noise. Cameras for autonomous vehicle guidance will require high saturation capacity and dynamic range to perform well in uncontrolled lighting outside.

When comparing sensors, it is important to consider multiple performance criteria. Image sensors are designed to balance trade-offs, and reliance on a single measurement can result in poor overall performance other important criteria are neglected.

Quantum Efficiency

This measurement is often used as an indicator for low light sensitivity. CMOS and CCD

image sensors convert light into electrical signals using the photoelectric effect. When photons enter the photodiode in a pixel, they create a charge by knocking electrons off silicon atoms. The more efficiently a sensor can convert incoming photons into electrical charge, the higher its Quantum Efficiency will be. While no sensor is 100 % efficient, Sony CMOS sensors can achieve up to 77 % QE, compared to 50 % on popular legacy CCD sensors. QE is wavelength dependent. Silicon is most sensitive to green light with a wavelength of 530 nm, while the QE generally falls to 0 % at wavelengths beyond 1050 nm. Monochrome sensors have higher QEs than

color sensors, as the RGB color filters restrict the range of wavelengths which can enter the pixel, reducing the number of photons which reach the photodiode. On sensor polarizing filters will also reduce the amount of light that can enter a sensor's pixels, reducing its QE.

Temporal Dark Noise (Read Noise)

To read the information captured by a pixel on a CMOS image sensor, the charge created by incoming photons is converted to voltage and the voltage value is digitized. Small variations at each step of this process can add up and can appear to show a signal even when no photons entered the sensor. Read noise

FUJIFILM
Value from Innovation

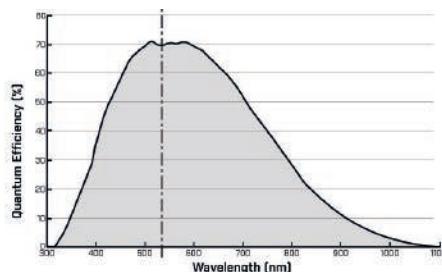

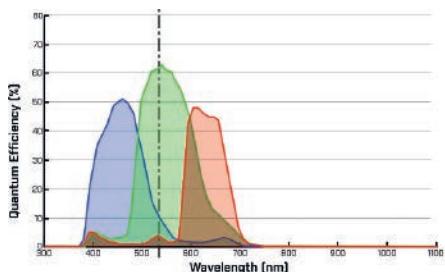

For 1.1" sensors
and still only 39mm
in diameter

The new Fujinon CF-ZA series. Small size, great ideas

Especifically developed for 1.1" sensors, the new CF-ZA series offers a high resolving power of 2.5µm pixel size and consistent brightness from the image center to the corners without vignetting – for all six models with focal lengths from 8mm to 50mm. More at www.fujifilm.eu/fujinon. Fujinon. To see more is to know more.

FUJINON

Example curves for the quantum efficiency of IMX428 color and monochrome sensors

is not affected by exposure time. Typical read noise values of current CMOS sensors are around 2.5 e-, while CCD sensors are usually in the range of 8 to 10 e-.

Absolute Sensitivity Threshold

Absolute Sensitivity Threshold (AST) combines QE and read noise and provides a much more useful measure of the actual sensitivity of a sensor than either of these measurements alone. AST is weakest signal which can distinguished from the read noise.

AST is a key metric for applications where low-light imaging performance is critical. It is also extremely helpful when comparing sensors with different pixel architectures, as high QE does not necessarily translate into good low-light performance.

Signal to Noise Ratio (SNR)

The higher the signal to noise ratio, the greater the amount of signal there will be relative to noise. Greater SNR yields better contrast and clarity, as well as improved low-light performance. Typical CMOS SNR is about 40 dB, with some achieving an SNR of 44 dB in Low Conversion Gain mode.

Power dB Ratio

dB is measured on a logarithmic scale. With every increase in 10 dB, the power increases by a factor of 10.

Saturation Capacity

The photodiode in a pixel can only hold a finite amount of charge. Saturation capacity is the maximum number of electrons that an individual pixel can store. Generally, the larger the surface area of pixel, the greater the saturation capacity. At saturation, additional photons entering a pixel will not result in a further increase in the brightness value recorded by the pixel.

A small saturation capacity may limit dynamic range. However, due to the dependence of dynamic range on additional factors, a large saturation capacity does not guarantee higher dynamic range.

Dynamic Range

Dynamic range is the difference between the maximum and minimum light intensities that a sensor can detect. A high dynamic range will enable sensors to capture details in both dark shadows and brightly lit highlights.

Dynamic range is important for a wide range of applications including automated optical inspection where identifying defects on dark IC packages and reflective solder joints in a single exposure is desirable, and autonomous vehicles which must be able to detect and avoid obstacles in highly variable and uncontrolled lighting conditions.

The dynamic range of images capture by a camera can be limited by reducing the

dB	Power Ratio
40	10,000
30	1,000
20	100
10	10
6	4
3	2
0	1

dB is measured on a logarithmic Scale. With every 10 dB increase, the power increases by a factor of 10.

bit-depth of the camera's Analog to Digital Converter (ADC), and by the bit-depth of the pixel format selected. When viewing images on a display, keep in mind that standard LCD displays are limited to 8-bit color, while HDR monitors are limited to 10-bit color. Compressing the dynamic range of higher bit-depth images to display on lower bit-depth displays requires post-processing known as tone mapping.

Gain

EMVA Gain is the number of electrons required to increase the pixel value from a 16-bit greyscale value to one value higher. Sensors with higher gain will appear brighter with fewer electrons. High gain can be useful for detecting very weak signals in low light conditions. ■

Reduced dynamic range leads to loss of detail in bright lighting and shadows.

About Baumer

The Baumer Group is one of the worldwide leading manufacturers of sensors, encoders, measuring instruments and components for automated image-processing. With around 2,700 employees and 38 subsidiaries in 19 countries, the family-owned group of companies is always close to the customer.

Capture the Essential: Industrial Cameras and Vision Sensors

Merging cutting-edge technologies and customer-focused consultancy has made us one of the leading manufacturers for image processing components. We offer a unique range of products, from industrial cameras and vision sensors to image processing components, for many different applications across varied industries. The location in Germany accommodates R&D and production under one roof which ensures our high product quality standards. Prior to delivery, every component undergoes rigid electrical and optical testing and inspection.

High-performance Industrial Cameras

High frame rates, exceptional image quality and ease of integration – that's what our industrial cameras stand for. Their robust, industrial design is the basis for long-term stability and precise image analysis. The portfolio includes CCD- and CMOS-based matrix cameras, standard-compliant with GigE Vision, Camera Link and USB3

Vision. Our many years of expertise make us understand your requirements to provide the optimum product for your application. Where standard products are too limited, we work together with you to develop customized components that fit perfectly to your application.

Easy and Intuitive Vision Sensors

Intuitive operation, fast and easy integration and configuration within minutes: These attributes characterize the Baumer VeriSens vision sensors. They can perform up to 22 different feature checks on object position and location, presence and completeness, reading and verifying human-readable imprints (OCR/OCV) or bar and matrix codes including GS1 codes. High process reliability is achieved with our patented FEX image processor. Models for color identification and inspection, with C-Mount design and integrated flash controller are also available as well as models with integrated white and infrared illumination.

About AutoVimation

AutoVimation produces protective camera enclosures and a wide range of accessories that allow to use machine vision systems in almost any environment. Thanks to the

patented camera mount the enclosure works like a heat-sink and can so be used in higher ambient temperatures. Water or Peltier cooling systems are available in order to extend the temperature range further. The „Machine-Vision Construction Kit“ makes it easy to integrate cameras, lights and other components into a machine – using

prefabricated parts, avoiding design time and allowing simpler adjustment to the application.

New are the IP69k stainless steel enclosures in hygienic design and the compact Meganova LED ring light with onboard strobe controller that mounts right behind the 3" front window.

About Edmund Optics

Edmund Optics (EO) is a leading producer of optics, imaging, and photonics technology. Supporting the semiconductor, electronics, biomedical, assembly, and manufacturing markets throughout the globe; EO electronic imaging and machine vision solutions have been used in a variety of inspection applications from food to automotive to pharmaceutical. EO's vast offering of machine vision lenses, illumination sources, and cameras offer a dynamic choice of solutions for any application. EO's extensive global manufacturing facilities also

allow for custom system design and development.

Customers can purchase items by contacting EO at +44 1904 788 600, via the catalog, or via the website at www.edmund-optics.eu, where all channels offer extensive technical support for selecting the right product to enable the final application.

About Fujifilm Optical Devices

Fujinon Lenses from Fujifilm

Tapping into optical technologies and precision processing and assembling technologies nurtured over many years, Fujifilm offers a wide variety of Fujinon lenses. The Fujinon brand is world-renowned for its innovative and reliable products in the field of broadcast & cine lenses, binoculars, CCTV lenses, machine vision applications as well as for special custom made optical products, for example those used in digital projectors, automobiles and in many other applications.

CCTV and Machine Vision lenses: The extensive product range of Fujinon CCTV and Ma-

chine Vision lenses features the appropriate solution for almost every application. The Japanese manufacturer offers a continuously growing product range of high resolution megapixel Zoom and Varifocal lenses for security applications in HD quality. Lenses for Machine Vision are precise optics with minimized distortion for optimal image quality – even in harsh environments. Special lenses round off the wide product range, like infrared-coated lenses for Day&Night, lenses for 3CCD cameras or high resolution 185° Fish Eye lenses. You no longer miss anything with Fujinon lenses.

About the JAI Group

JAI is a global manufacturer of digital cameras for machine vision, traffic imaging, surveillance, life science and scientific research.

Besides a broad range of leading-edge 1-CMOS progressive area scan and line scan cameras, JAI is a leading provider of multi-imager cameras incorporating advanced prism-block technology, including 3-CMOS RGB area scan cameras, 2-CMOS multi-spectral cameras plus a complete family of 3-CMOS/4-CMOS line scan cameras. JAI's product program in-

cludes cameras for visible, UV, NIR, polarized and SWIR imaging with GigE Vision, USB3 Vision, CoaXPress, Camera Link and SFP+ interfaces.

About Matrix Vision

Matrix Vision is a leading manufacturer and offers a large spectrum of digital cameras – from USB, GigE with Power over Ethernet to smart cameras with integrated easy configurable machine vision software. A wide range of USB 3.0 cameras with CMOS sensors up to 31 megapixels are provided with the USB3 Vision Standard. At the moment Matrix Vision is going to expand its cost-effective and compact board-level camera series for embedded vision. Furthermore, Matrix Vision will introduce a new 10GigE camera in 2020. Besides an extensive range of standard prod-

ucts we offer custom solutions, which provide maximum utility for users as a result of continuous development. Join our vision world and benefit from cutting-edge technologies and extensive services.

About Micro-Epsilon

Micro-Epsilon is a medium-sized family-run company which plays a leading role in measurement technology. For more than 50 years we have continuously offered reliable, high performance, unique solutions particularly when high precision measurement or inspection is required. Our product range covers sensors for the measurement of distance and displacement, sensors for IR temperature measurement and color detection, as well as

systems for dimensional measurement and defect detection.

Innovative products that provide the highest level of precision are created through intensive research and development processes, unique know-how and a broad network of collaborative operations.

About Optics Balzers

Optics Balzers is the innovative and independent industry partner for the development and production of coated optical components and subassemblies. The company possesses a broad and in-depth know-how in optical thin-film coating processes, complemented by sophisticated patterning, glass bonding and sealing, and further processing capabilities necessary for producing optical thin-film coated components up to optical subassemblies.

Highly experienced and skilled development and engineering teams closely collaborate with customers to develop innovative solutions meeting their requirements and design robust processes to manufacture the customer specific components. The combination of these capabilities and skills places Optics Balzers at the forefront of markets in the photonics industry such as Life Science, Industry, Consumer, Space, Automotive, and Lighting.

About Ricoh International

Ricoh Machine Vision started in 1959 as Cosmicar, changing to Pentax in 2000 and finally to Ricoh in 2012 and is concentrated on the development, production and sale of high-quality optics for applications in machine vision and image processing.

The company is proud of the respect its products have gained over nearly 60 years of high quality manufacturing. All Ricoh Machine Vision lenses are developed with a focus on quality and performance and designed for a long service-free life, achieved by the combination of using modern technologies with precision manufacturing.

Ricoh offers a wide range of Machine Vision lenses to fulfil

almost any demand, producing a range of area scan lenses in VGA, 2MP, 5MP and 9MP/12MP resolutions, lines scan lenses and specialist UV lenses.

Development

Ricoh's latest developments are the use of floating focusing mechanisms to produce low-distortion, high resolution images at all distances, not just in the centre but over the entire image measurement field. Minimum object distances have been reduced to as low as 80mm. New models use JIAA (Japan Industrial Imaging Association) lens standards and satisfy S-Rank* (Best Performance Class) criteria.

About Stemmer Imaging

Stemmer Imaging is a leading international machine vision technology provider. With staff located across Europe, Latin America and Asia, we provide state-of-the-art machine vision solutions, extensive knowledge and outstanding customer service.

Our customers value us as a trusted advisor, positioned to deliver tailored solutions. These include components that we can pre-configure, sub-systems designed to reduce time and effort when integrating vertical applications, and customer-specific solutions delivering a competitive advantage to predominantly OEMs – all powered by

About SVS-Vistek

SVS-Vistek GmbH – a member of the TKH Group – is an innovative manufacturer of high-quality cameras for industrial image processing for more than 30 years. We offer unique know how and experience in the field of machine vision. We exclusively develop and produce a wide range of standard industrial cameras as well as cameras with highest picture quality and all relevant interfaces in our own clean rooms at our headquarters in Seefeld

near Munich: Quality Made in Germany!

With powerful components such as lenses, lighting, filters, frame grabbers and cables, we support customers in the realization of economical and, if necessary, individual image processing solutions for a wide range of industries.

About Teledyne Lumenera

Teledyne Lumenera, part of the Teledyne Imaging Group, provides an extensive range of high-quality digital cameras with unique combinations of speed, resolution, and sensitivity to satisfy the demands of today's imaging applications. Teledyne Lumenera also offers custom design services to OEM partners requiring specialized hardware and software features.

Our core competencies include digital bus technologies such as USB 3.0, USB 2.0, Ethernet, HDMI and Gigabit Ethernet (GigE) as well as a complete command of digital imaging hardware and software built around CMOS and CCD based imagers. Our diversity provides our cus-

tomers with the benefits of superior price-to-performance ratios and faster time-to-market.

Teledyne Lumenera also provides customized design services and licensing options to our partners and OEM customers. Teledyne Lumenera cameras can be adapted to fit application-specific requirements whether simple or complex.

About Ximea

For over 25 years Ximea is developing, manufacturing and distributing industrial and scientific cameras for a myriad of applications. From smallest board level units, over high-performance cameras, to embedded and multi-camera systems, specialized products for your challenging and advanced demands are offered.

Ximea serves all types of tech companies around the world, from global players to small start-ups. Its camera technologies allow the customers to improve their products and to enable their applications. Together with the client, Ximea is facing their challenges to solve individ-

ual needs not only with standard products but also with custom modifications and designs.

The latest innovations include tiny USB3 cameras, PCIe streaming cameras beyond 8K resolution and high dynamic range, 2K and 4K high-speed, cooled scientific and hyperspectral cameras, X-Ray and a multi-camera platform for high-bandwidth applications.

Ximea operates its agile R&D and production facilities, to ensure the highest quality. The 50/50 mixture of OEM and serial production guarantees sustainable innovations and high-level support. The fastest and most compact cameras with latest

Fast, Compact and Efficient Cameras

Subminiature USB cameras:

World's smallest industrial cameras with a size of only 15x15 mm offer 5 Mpix and 18 Mpix resolutions for size and weight constraint applications.

PCIe based high speed cameras:

These cameras use fast and high-resolution CMOS sensors and stream images with up to 64 Gbit/s to the host computer. The updated portfolio includes the CB654 with 65.4 Mpix @76 fps and CB262 with 26.2 Mpix @150 fps.

USB3 Vision camera series:

With this line of extraordinary small, lightweight, fast, efficient and highly customizable cameras, XIMEA offers a unique value and performance for the industrial market. The perfect fit for OEMs and system integrators.

Hyperspectral imaging cameras:

Smallest and most lightweight USB3 and PCIe based hyperspectral cameras with 16 up to 150 spectral bands in the visible light and near infrared. Ideal for UAV and mobile applications.

Scientific grade cameras:

For the most demanding applications that require the ultimate image quality. With large pixels, high resolutions, 16 bits dynamic range, low noise and high sensitivity. The utilized technologies include medium formats, back-thinned sCMOS, X-Ray, and subzero peltier cooling.

For 25 years, Allied Vision Technologies has been helping people see the bigger picture. Allied Vision's camera portfolio is one of the largest in the market and offers a camera for nearly any application. If no standard product fits, the Allied Vision Modular Concept creates additional flexibility providing hardware option combinations that are almost endless. Allied Vision cameras are easy to integrate into any machine vision system thanks to our Software Development Kit (SDK) that is compatible with all common operating systems, camera interfaces and image-processing libraries.

Zeiss ZF lenses for industrial applications are key components in complex production processes as well as in measuring tasks, quality assurance and many other applications. The infrared lenses of the ZF series are suitable for the use with special cameras like IR cameras without an IR blocking filter. The transmission of ZF-IR lenses adds up to 70% at 1000 nm, while usual lenses exhibit only 20%. Zeiss Visionmes lenses are developed for crucial measuring tasks in industry and feature telecentric optics. For optical metrology at high precision telecentric optics are essential.

JAI is a global manufacturer of digital cameras for machine vision, traffic imaging, global security, medical imaging and scientific research. Besides a broad range of leading-edge 1-CMOS progressive area scan and line scan cameras, JAI is a leading provider of multi-imager cameras incorporating advanced prism-block technology, including 3-CMOS RGB area scan cameras, 2-CMOS multi-spectral cameras plus a complete family of 3-CMOS/4-CMOS line scan cameras. JAI's product program includes cameras for visible, UV, NIR and SWIR imaging with GigE Vision, USB3 Vision, CoaXPress, Camera Link and SFP+ interfaces.

We are proud to announce the new super compact M112FM series: The lenses have been developed for cameras with large 1/1.2" imagers, like the IMX174/IMX249. They deliver cutting edge optical performance with no vignetting and reach a 3.45 micrometer pixel pitch resolution for imagers like IMX250/IMX264.
All this in a super small body of just 29 mm diameter.

Vision & Control has been developing, manufacturing and marketing a coordinated portfolio of modular machine vision systems for more than 30 years. The company's product development expertise, together with many years of customer support and service experience, gives Vision & Control a unique pool of machine vision expertise, including R&D, production and training.

Our range of services includes consultancy provided by experts, which specifically addresses your needs; professional analysis of your particular task, feasibility studies in the applications lab and training. Machine vision systems supplied by Vision & Control are the ideal choice for monitoring, quality control, verification and automation applications in all types of manufacturing and assembly operations.

- 100% quality control
- performance enhancement in production
- increased machine control process reliability and
- better energy efficiency

Vision Engineering is a global leading-edge manufacturer of unique ergonomic stereo microscopes and non-contact measuring systems. Since its formation in 1958, Vision Engineering has become one of the world's most innovative and dynamic microscope manufacturers, with a global distribution network. The product range includes solutions for almost every inspection and measurement application. Choose unparalleled clarity and precision. Innovative and superior ergonomic designs lead to performance and productivity gains. Quality is the goal! For us and our customers as well. That's the reason why we present to our customer worldwide successful products. The eyepiece-less technology which is implemented in our systems allows a nearly fatigue-free operation with the microscope. More comfort is not possible.

Z-Laser is known as a reliable partner for the machine vision industry with extensive knowledge of more than 30 years in laser production.

Our new ZX lasers are based on a fully automated production process that guarantees highest levels of precision and reproducibility. Numerous optical configurations, different module dimensions, and the stainless-steel housing (IP67) are key to a smooth integration in any machine vision system.

The Z-Fiber series is the high-end choice wherever an exceptional beam performance (micro lines) for high-resolution measurements is required.

High power applications are covered by the ZQ1 series. The industrially

suitied performance and design make this product the perfect solution for machine vision, or road and rail inspection (certified DIN EN 61373:2011-04)

Adimec designs and manufactures high-performance industrial cameras for equipment manufacturers worldwide with demanding machine vision, medical, or military applications whose goal is to be a product leader in their market. The Netherlands-based Holding company has business offices in Europe, the United States, Japan, and Singapore. Adimec cameras use high quality CCD and CMOS sensor technologies and support a range of interfaces such as CameraLink, GigE, CoaXPress, LVDS, HD-SDI, DVI or custom.

Distributor
ATD Electronique offers innovative components dedicated to imaging applications for the European market: image sensors (CCD, CMOS, InGaAs, Thermal), optics, interface circuits, imaging processors, cables, M-OLED displays. Started with Sony 27 years ago, ATD Electronique's offer has been enhanced with AMS (formerly CMOSIS & Awaiba), Fairchild Imaging, Varioptic, Geo Semi. It continues to expand with MPression IPs, cables from OKI Electric Cable and recently SWIR sensors from Sofradir.

By combining innovative technology and customer-oriented service, Baumer ranks among the leading manufacturers of digital cameras and vision sensors. Modern image processing applications face the challenge of successfully completing complex inspection tasks at top speed. Baumer products are specially developed for demanding applications with high performance and quality requirements. With long-time stable reliability, versatility and easy integration, they convince customers all over the world.

Opto Engineering designs, manufactures and markets imaging components. Our expertise in developing innovative optical systems has earned us worldwide recognition as a supplier of unmatched optical solutions. Opto Engineering is the world leader in telecentric technology as well as the creator of many other optical products which helped our customers solve machine vision applications once considered impossible. Over the years, our expertise has expanded to other technologies; today Opto Engineering is also a primary supplier of advanced LED illuminators, imaging software, cameras, adaptive optics and artificial intelligence machine vision units. While we transform our know-how and ideas into added-value products and services for our customers, we stay true to our "Optics DNA": our constant drive is to deliver increasingly more advanced Optical Imaging Technologies.

Tattile since 1988 develops and produces sophisticated vision systems for different applications in the three divisions Industrial, Traffic and Railways. Tattile offers ANPR solutions for ITS applications and proposes a comprehensive catalogue of smart cameras, line-scan cameras, digital cameras, and multi-camera vision controllers for high performing applications. Technological partnerships enable customized solutions, made to respond to the needs of industrial OEMs from the most different industry sectors. Tattile is member of the Lakesight Technologies group.

Viewworks' industrial cameras create values beyond what is visible.

Viewworks develops industrial cameras based on the industry's top optical design technology. The industrial camera plays the role of an "eye" in the machine vision, which is one of the core areas of industrial automation. For quality control and stabilization of the inspection objects, the company focuses on the development of camera technologies for taking higher resolution at a faster speed.

For a company to achieve the maximum system performance in the machine vision industry, multilateral experiences and technical knowledge in sensors, optics, applications, etc. are essential. Viewworks is ready to step up to become "your vision partner" that proposes the optimized system based on the expertise and market experience in various applications. We will continue to provide cameras of the

cutting edge technology and top quality as well as value proposition that goes beyond just imaging.

VIEWWORKS

Viewworks Co., Ltd.

41-3, Burim-ro 170beon-gil,
Dongan-gu, Anyang-si, Gyeonggi-do,
14055 Republic of Korea

Producer, Integrator

Located in Shanghai, China, xVision provides automation solutions for manufacturers, focusing on 3C (Computer, Communication, Consumer Electronics) customers. They have a powerful team that includes Structure Design, Robotic Application and Machine Vision Application. xVision pro-

vides a one of a kind 3D sensor that outputs Depth image, RGB images and Point Cloud data and wants to be one of the leading Machine Vision companies in China.

xVision Automation S&T Shanghai Inc. · 2F, Building C509, Caobao Road, Xuhui, 201108 Shanghai, China, Tel.: +86 18 621 600 840

Solution Provider

The Huaray Tech is machine vision subsidiary of Dahua Technology CO., LTD. Dahua Technology is a leading advanced video surveillance solution provider with a complete product portfolio including an advanced series of front to back end devices, display, software, smart home solutions,

access controls and alarms as well as intelligent traffic systems.

Zhejiang Huaray Technology CO.LTD. · NO.1199 BinAn Road, Binjiang District, Hangzhou, China, Tel.: +86 571 872 357 66, www.huaraytech.com

Products & Services

-
- 66 Cameras & Image Sensors

Advertising price list
from October 2019

Circulation
20,000 copies

Individual Copies
Nine issues € 51.00;
single copy € 16.30 plus postage
Pupils and students receive a
discount of 50 % at sight of a valid
certificate.

Subscription orders can be revoked
within 1 week in writing. Dispatch
complaints are possible only within
four weeks after publishing date.
Subscription cancellations are ac-
cepted six weeks before end of year.

Specified identified contributions
are the responsibility of the author.
Manuscripts should be addressed
to the editorial office. We assume
no liability for unsolicited, submitted
manuscripts. Reproduction, includ-
ing excerpts, is permitted only with
the permission of the editorial office
and with citation of the source.

The publishing house is granted
the exclusive right, with regard to
space, time and content to use the
works/editorial contributions in
unchanged or edited form for any
and all purposes any number of
times itself, or to transfer the rights
for the use of other organizations

in which it holds partnership inter-
ests, as well as to third parties. This
right of use relates to print as well
as electronic media, including the
Internet, as well as databases/data
carriers of any kind.

Material in advertisements and
promotional features may be con-
sidered to represent the views of
the advertisers and promoters.

All names, designations or signs
in this issue, whether referred to
and/or shown, could be trade
names of the respective owner.

inspect
award 2021

**Do not think twice,
submit now!**

Where? inspect-award.de (German)
or inspect-award.com (English)

Until when? 30 April 2020

Who? Every company whose
product from the Vision, Automation
and Control sector convinces with
an innovative approach.

FAST, HIGH-RESOLUTION INSPECTION

INTRODUCING Genie™ Nano-5G GigE Vision Cameras

Features Ethernet's 5GBASE-T Speed Grade

The Genie Nano-5G series are engineered for imaging applications that require high-speed data transfer. This new speed grade of Ethernet delivers data rates of up to 5Gbps over commonly deployed Cat5e cabling, boosting data throughput of up to 100 meters through twisted pair copper cabling. With resolutions from 3.2M to 12M, Genie Nano-5G GigE Vision cameras offer the same robust build quality and TurboDrive™ for unrivaled frame rates.
